

24-port single-mode optical cable

Article Overview

A 24-port single-mode optical cable typically features 24 individual fibers, optimized for long-distance, high-speed data transmission, and is available in indoor, outdoor, armored, and MPO configurations.

Overview

A 24-port single-mode optical cable contains 24 individual single-mode fibers (9/125 μm), designed for long-distance communication with low attenuation and high performance at 1310nm and 1550nm wavelengths . These cables are commonly used in telecommunication networks, data centers, enterprise backbones, and high-speed network deployments.

Types and Construction

-

Loose Tube Gel-Free Cables: Designed for outdoor or limited indoor use, these cables have SZ-stranded loose tubes that isolate fibers from environmental stress and allow easy mid-span access. They are waterblocked using water-swappable materials and feature a medium-density polyethylene jacket for durability .

-

Armored Multitube Cables: These outdoor cables include jelly-filled loose tubes with a single sheath and corrugated steel armor for mechanical protection. They comply with ITU G.652 standards, with zero dispersion wavelength of 1300–1324 nm and low polarization mode dispersion .
