

Albanian power distribution box dimensions

Article Overview

Albanian power distribution boxes typically follow European standards, with dimensions varying by application from small residential enclosures to large industrial PDUs.

Overview

Power distribution boxes in Albania are designed according to European and local electrical standards, ensuring safety, reliability, and compatibility with the national grid. They are used in residential, commercial, and industrial settings, and their size depends on the number of circuits, type of breakers, and mounting method.

Typical Dimensions

- **Residential Enclosures:** Usually 300–600 mm height, 200–400 mm width, and 100–200 mm depth, suitable for 4–12 circuit breakers. These are often wall-mounted and designed for indoor use.
- **Commercial/Small Industrial PDUs:** Dimensions range from 600–1200 mm height, 400–600 mm width, and 200–300 mm depth, accommodating 12–36 breakers or modular components. These may be surface-mounted or recessed.
- **Large Industrial Distribution Boxes:** Can exceed 2000 mm height, 800–1000 mm width, and 400–600 mm depth, designed for high-capacity circuits, multiple feeders, and integration with busbars.
