

Cable tray flat joint

Overview

A cable tray joint plate is a flat metal piece used to join two cable trays. It comes with drilled holes for nuts and bolts. Cable tray fittings are essential accessories that improve the flexibility, stability, and functionality of cable tray systems. A cathodic action occurs on cut surface and roughened in order to achieve a good bond. It connects two trays together and ensures a strong joint. A reliable manufacturer always focuses. The following cable trays are available : pre-galvanised cable tray, post galvanised cable tray, epoxy powder coated cable tray, plastic coated cable tray, stainless steel 316 grade cable tray and stainless steel 304 grade cable tray. They offer an alternative to open wiring or electrical conduit systems and are necessary for cable management in commercial and industrial construction, as well as. Characteristic of this steel type is that – prior to mechanical deformation – it is given a zinc coating by means of a continuous dipping process.
