

Certificate warranty for 40G network security equipment

Article Overview

Certificate warranties for 40G network security equipment provide coverage for defects in materials and workmanship, with specific performance guarantees depending on the manufacturer and product type.

Cisco Warranty Overview

Cisco offers hardware warranties that cover manufacturing defects and provide repair or replacement of defective products. Standard warranties typically last 90 days, but some products have extended coverage. Cisco warranties generally do not include software updates or technical support, which are provided under separate service contracts. The warranty applies to the original end user and is non-transferable. Cisco also offers enhanced options like advance replacement for certain products, and the warranty terms can be verified using the Warranty Finder tool by entering the product ID .

Fortinet Warranty and Subscription Services

Fortinet's FortiGate network security equipment is supported through FortiGuard AI-powered Security Services, which provide real-time protection against malware, ransomware, and emerging threats. While the warranty covers hardware defects, the subscription bundles (ENT, UTP, ATP) enhance security capabilities and operational support. These bundles are not traditional warranties but complement hardware coverage by ensuring ongoing protection and compliance .
