

Concealed Fiber Optic Router Box

Article Overview

A concealed fiber optic router box allows you to hide your router while maintaining signal performance and cable management.

Commercially Available Options

You can purchase pre-made router concealment boxes designed for both aesthetic appeal and functionality. Options include:

- Decorative covers that resemble books, planters, or small furniture pieces, available on platforms like Etsy and Amazon, which allow routers to blend into home decor while providing ventilation for heat dissipation .
- Cable management boxes made of bamboo or plastic with magnetic lids, suitable for desktop or TV setups, which hide the router and organize cables .
- Wall-mounted fiber optic enclosures such as CommScope's BUDI™ series or RapidFiber® EFDT boxes, which are designed for indoor or outdoor fiber distribution and can conceal routers or network equipment in a secure, professional manner .

DIY and Placement Tips

If you prefer a DIY approach, consider these strategies:

- Place the router in a cabinet with open or cane doors to avoid signal blockage, or drill a small hole in the back panel for cable routing .
- Use hollowed-out books or decorative boxes to hide the router on a shelf while keeping cords accessible .
- Avoid metal or solid glass enclosures, as they can significantly reduce Wi-Fi signal strength .
