

Distribution Network Automated Operation and Maintenance Management System

Overview

ADMS provides distribution utilities with real-time monitoring and control, network analysis, network optimization and outage management capabilities in an integrated software architecture, enabled by a high-performance, scalable, and cybersecure SCADA platform. GridOS ADMS is the most advanced and scalable distribution management system available. It transforms real-time data into actionable insights that drive grid reliability, resilience, and efficiency, even in the most severe weather conditions. Direct communication protocols include Modbus®, DNP3 events via graphical and tabular views. Operation Monitor tracks, alarms and schedules maintenance. ETAP Distribution Management System (DMS) is an intelligent geospatial (GIS) based distribution network solution that proactively reduces peak demand, optimizes network assets, while assisting distribution networks deliver electricity more efficiently, reliably, securely, and economically. Real-time network topology and power flow coupled with robust visualization and study mode across all functionality.
