

Drilling holes in the casing of the construction site s electrical distribution box

Overview

From a technical point of view, it is feasible to drill holes in the explosion-proof box. This guidance is aimed at those responsible for planning and subsequent management, and those who control the installation and use of electrical systems and equipment on construction sites. But just as important as the hole itself is making sure it's done in line with fire safety regulations and cable containment. When underground cables are damaged, people can be killed and injured by electric shock, electrical arcs (causing an explosion), and flames. This often results in severe burns to hands, face and body, even if protective clothing is being worn. Damage can be caused when a cable is: crushed by a. from the edge of the drilled hole. Should it become necessary for an employee to enter within the restricted access zone, the employee shall wear a full-body harness and be tied off to a suitable anchorage u site and confirm structure number. Verify the presence of a curr t Underground Utility. c roles in those operations.
