

Elevator power distribution box inspection

Article Overview

Inspecting an elevator power distribution box ensures compliance with NEC standards, ASME codes, and safe operation of the elevator system.

Key Inspection Steps

1. Visual and Physical Inspection

- Check for signs of overheating, corrosion, or physical damage to the enclosure and components.
 - Ensure all covers, doors, and panels are secure and can open at least 90° for safe access .
 - Verify that the working space around the box meets NEC requirements: minimum 30 inches wide or the width of the equipment, whichever is greater, with clear access to live parts .
- #### 2. Electrical Connections and Components

- Inspect main disconnects, fuses, circuit breakers, and bus bars for tight connections and proper labeling .
- Confirm that wiring methods comply with NEC Article 620, including proper insulation, grounding, and separation from other circuits .

3. Operational Checks

- Test emergency stop circuits, overload protection, and interlocks to ensure they function correctly.
