

Enterprise-grade melt fiber tray

Article Overview

Enterprise-grade melt fiber trays are high-precision, durable, and sustainable packaging solutions designed for automated production and sensitive product protection.

Overview

Melt fiber trays, also known as molded fiber trays, are engineered to provide dimensional stability, precision, and protection for sensitive products such as vials, pre-filled syringes, pens, and other medical or pharmaceutical items. They are designed to replace plastic trays while maintaining the same quality standards required in highly regulated environments, including pharmaceutical and medical technology sectors .

Key Features

- **Material and Manufacturing:** Made from wet-molded fiber or high-strength composites, these trays combine smooth surfaces, sharp edges, and consistent density for reliable product protection . Some variants, like Fibrestat trays, are glass-reinforced and electrostatic-dissipative, ideal for sensitive electronic or pharmaceutical applications .
- **Automation Compatibility:** Enterprise-grade trays are designed for auto-stacking, de-nesting, and integration into automated packaging lines, ensuring efficiency in high-volume production .
- **Environmental Compliance:** Fully recyclable and compliant with EU Packaging and Packaging Waste Regulation (PPWR), these trays help reduce environmental impact, Scope 3 emissions, and avoid plastic taxes .
