

Fiber optic router has signal status

Overview

A green light usually means normal operation, while red or blinking lights signal issues. If you see a “LOS” (Loss of Signal) indicator, verify or restore power to my ONT and check all connections. If you're using a power strip, check. Fiber optic networks are built for speed and reliability, but issues like signal loss, slow performance, or intermittent connectivity can still occur. By following a structured troubleshooting process—from inspecting cables and cleaning connectors to running OTDR tests—you can quickly identify. The LEDs on your modem, optical network terminal (ONT), router, or modem/router combo (gateway) are most likely blinking because they're communicating what the device is doing, or there's an error. All networking devices, like modems and routers, provide a row of status lights that represent the. Router status lights, often referred to as LED indicators, are small lights on the front panel of your router. POWER Normal: Solid/stagnant light. Begin by examining all visible fiber optic cables. Look for sharp bends, kinks, or.
