

Four types of optical cable terminals

Overview

Fiber optic connectors can be categorized according to different standards such as utilization, fiber count, fiber mode, and transmission method. They are also divided into single-mode and multimode types based on their distinct characteristics. Unlike fiber splicing, which is permanent, connectors allow for easy connection and disconnection of cables, making them ideal for maintenance and flexibility in. About 100 fiber-optic connector types have been introduced in today's market, but only a small subset is common in modern networks. Each type is optimized for specific uses and includes features suitable for different devices. We'll also provide practical advice.
