

Georgian concealed electrical box

Article Overview

A Georgian concealed electrical box is a hidden electrical enclosure designed to safely house outlets, switches, or junctions behind walls, often finished with Georgian-style brass plates for a traditional aesthetic.

Overview

A concealed electrical box is an enclosure installed behind walls or panels to hide wiring and electrical components while maintaining safety and compliance with building codes . These boxes are commonly used in both residential and commercial settings to improve aesthetics, prevent accidental contact with live wires, and allow for future electrical upgrades without visible clutter .

Georgian Style Finish

For a Georgian aesthetic, decorative plates such as the Varilight Georgian Brass Double Blank Plate or polished brass options from m.marcus can be used . These plates feature rope-edged or polished brass designs that complement traditional interiors while securely covering unused or decommissioned boxes. They are available in single or double-gang formats to fit standard UK or US back boxes and provide a neat, period-style finish .
