

Household electrical distribution box dimensions and price

Article Overview

A typical residential electrical distribution box is designed for safety and efficiency, with standard dimensions ranging from 12 to 42 circuits, and prices generally between \$50 and \$500 depending on capacity and features.

Design and Features

A household distribution box, also called a breaker panel or electrical panel, serves as the central hub for routing electricity safely from the main utility supply to individual circuits in a home . Key design elements include:

- **Main Switch:** Controls the entire electrical system, allowing quick shutdown for maintenance or emergencies .
- **Room Socket Circuits:** Separate circuits for each room to isolate electrical issues .
- **High-Power Appliance Circuits:** Dedicated circuits for appliances like stoves, air conditioners, and water heaters to prevent overload .
- **Lighting Circuits:** Independent circuits for lighting to ensure stable operation .
- **Protective Devices:** MCBs (Miniature Circuit Breakers), RCCBs (Residual Current Circuit Breakers), and RCBOs for overload and short-circuit protection .
- **Material:** Heavy-duty cold-rolled steel for durability and fire resistance, or high-grade UV-resistant plastics for residential or corrosive environments .
- **Ingress Protection (IP) Ratings:** IP20 for indoor residential use; higher ratings like IP44 or IP65 for moisture or dust-prone areas .
