

How many megabits should I buy for my fiber optic router

Overview

A 500 Mbps fiber connection is ideal for: This speed is sufficient for the average individual or small household looking to engage in occasional high-usage activities. It's also a great starting point for homes beginning to adopt smart devices. Because “bits” of data are very small, speed is usually measured in megabits, or millions of bits, per second (Mbps). Almost any internet speed is fine for receiving a text-only email, and you. In this guide, we'll break down what Mbps means, compare various connectivity types (like fiber internet, DSL, cable, and satellite), and help you choose the best internet plans based on your usage. Choosing the optimal amount of Mbps for your internet speed needs is a big deal.
