

How to configure IP settings on a mobile fiber optic router

Article Overview

To configure a mobile fiber optic connection, connect your router to the ONT, access the router's admin panel, set the WAN type (often PPPoE), input ISP credentials, and configure LAN IP and Wi-Fi settings for secure, optimized performance.

Step 1: Physical Connection

- Install the Optical Network Terminal (ONT): Connect the fiber optic cable from the wall outlet to the ONT. Power it on and wait for the status lights to stabilize (usually 2-5 minutes) .
- Connect the Router: Use an Ethernet cable to link the ONT's LAN/WAN port to your router's WAN port. Ensure the router is powered on and ready .

Step 2: Access Router Admin Panel

- Open a web browser on a device connected to the router.
- Enter the router's default IP address (commonly 192.168.1.1 or 192.168.0.1) in the address bar .
- Log in using the default credentials (often admin/admin) or the credentials provided by your ISP or router documentation .

Step 3: Configure WAN/Internet Settings

- Select WAN Connection Type: Most fiber connections use PPPoE. If required, input the username and password provided by your ISP.
