

How to quickly thread pigtails into tubing

Article Overview

The fastest way to thread pigtails into tubing is to use pre-made threaded inserts or star-type tube inserts, which simplify installation and provide a secure hold.

Quick Installation Methods

- Threaded Inserts (Star or Metal Type)
- Star-type inserts are designed to grip the inside of round or square tubing without welding. They expand as you screw them in, providing a strong hold .
- Metal threaded star inserts fit various tubing diameters (e.g., 1" OD, 16-18 gauge) and thread sizes like 1/4-20, making them versatile for DIY or industrial applications .
- Installation is fast: simply drill the correct hole, insert the threaded insert, and tighten. No welding or complex machining is required.
- Tapping Thin-Wall Tubing
- For thin-wall tubing, you can use a truncated or rolled thread to avoid weakening the tube .
- Chamfering the tube end and using a serial tap (#2 or similar) allows you to cut threads quickly. Using a slip-fit cap with anaerobic adhesive can also save time while maintaining strength .
- Pigtail Hose Threading for Gas Applications
- For propane or natural gas pigtails, thread the 1/4" NPT fitting into the regulator first using Teflon tape or thread glue, then attach the POI side to the tank valve. Check for leaks with soapy water and tighten as needed .
- Avoid bending the tube sharply to prevent cracking, and ensure all connections are fully seated.
