

Indoor power distribution box with nine circuits installation price

Article Overview

The total cost for an indoor 9-circuit power distribution box installation typically ranges from \$250 to \$600, depending on the box type, materials, and labor.

Distribution Box Cost

A standard 9-way indoor distribution box (DB) designed for single-phase residential or small commercial use generally costs between \$100 and \$300 for the unit itself, depending on the brand, material (steel or PC+ABS alloy), and IP rating. Indoor boxes usually require an IP44 rating, which protects against solid objects and splashing water, making them suitable for controlled environments. Higher-end models with advanced features, such as bus bars, DIN rails, or enhanced safety certifications, may cost closer to \$250-\$300.

Installation Costs

Professional installation by a licensed electrician is essential to comply with local electrical codes and ensure safety. Labor costs vary by region but typically range from \$100 to \$300 for a standard indoor 9-circuit installation. This includes mounting the box, wiring the circuits, connecting breakers, and testing the system for proper operation. Additional costs may arise if new conduits, breakers, or upgrades to existing wiring are required.

Factors Affecting Total Price

- **Material and durability:** Steel or alloy boxes are more expensive than basic plastic enclosures.
