

Installation of doorway sleeve for distribution box

Motor protection controller

Article Overview

The door sleeve for a distribution box should be installed by marking the location, positioning the sleeve accurately, securing it to reinforcement, and ensuring proper alignment before concrete or wall closure.

Step-by-Step Installation

1. Preparation and Planning

- Review the approved shop drawings and project specifications to determine the exact location and invert level of the sleeve .
- Select the appropriate sleeve material (e.g., PVC, HDPE, or metal) based on the environment and electrical requirements .
- Gather necessary tools such as measuring tape, wire ties, level, and cutting tools.

2. Marking and Positioning

- Mark the center and invert level of the sleeve on the reinforcement or steel bars where the distribution box will be installed .

- Clear the area of any obstructions to ensure the sleeve can be placed without interference.

3. Securing the Sleeve

- Position the sleeve in the marked location and check for proper alignment and level .
- Tie the sleeve securely to the steel reinforcement using suitable wire to prevent movement during concrete pouring or wall construction .
