

Is it okay to not use a router with fiber optic broadband

Article Overview

You technically can connect a single device directly to a fiber ONT without a router, but for multiple devices, Wi-Fi, and full network functionality, a router is strongly recommended.

Fiber Internet Setup

Fiber optic internet uses an Optical Network Terminal (ONT) to convert light signals from the fiber line into digital data that your devices can use. Unlike DSL or cable, fiber does not require a traditional modem because the ONT handles signal conversion. The ONT typically provides an Ethernet output that can be connected directly to a computer or other device.

Connecting Without a Router

It is possible to connect a single device directly to the ONT via Ethernet. This setup can provide internet access without a router, but it has limitations:

- Single device only: Without a router, you cannot easily connect multiple devices simultaneously.
- No Wi-Fi: Direct connection to the ONT does not provide wireless access.
- Limited network management: Features like parental controls, VPNs, or Quality of Service (QoS) are unavailable without a router.

Benefits of Using a Router

Using a router with your fiber connection offers several advantages:
