

Lc fiber optic patch cord single core

Article Overview

An LC single core fiber optic patch cord is a simplex cable with a single fiber strand, typically used for high-speed, long-distance singlemode connections.

Overview

An LC fiber optic patch cord is a short-length fiber cable terminated with LC connectors at both ends, designed to connect network devices such as switches, routers, and transceivers. Single core (simplex) LC patch cords contain one fiber strand, allowing data transmission in a single direction, which is ideal for BiDi (bidirectional) transceivers or applications requiring one-way communication .

Fiber Types

- Singlemode (SMF, 9/125 μm): Supports long-distance transmission with low attenuation, commonly using OS2 fiber for indoor/outdoor applications. Singlemode cords are typically yellow and suitable for distances from hundreds of meters up to several kilometers .
- Multimode (MMF, 50/125 μm or 62.5/125 μm): Used for shorter distances, supporting high-speed data up to 100G depending on the OM standard (OM3, OM4, OM5). Multimode cords are color-coded (OM3 aqua, OM4 violet, OM5 lime green), .

Connector and End-Face Types

- LC Connector: Small form-factor connector, reliable for high-density applications.
- Polish Types:
 - UPC (Ultra Physical Contact): Low insertion loss, moderate return loss, suitable for most Ethernet and telecom applications.
