

Low-voltage cable tray price information

Article Overview

Low-voltage cable tray prices vary based on material, size, load capacity, and installation requirements, with steel, aluminum, and fiberglass being the most common options.

Price Factors

The cost of low-voltage cable trays depends on several key factors:

- **Material:** Steel trays are strong and durable, aluminum trays are lightweight and corrosion-resistant, and fiberglass trays offer high chemical resistance and electrical insulation properties .
- **Dimensions and Load Capacity:** Tray width, depth, and length, along with the weight of cables they support, directly affect pricing .
- **Environmental Considerations:** Corrosion resistance, fire safety ratings, and suitability for indoor or outdoor use influence cost .
- **Design and Features:** Modular designs, tool-free assembly, and accessories like covers or wire mesh can increase the price but reduce installation labor .

Typical Price Ranges

While prices vary by region and supplier, general ranges include:

- **Steel cable trays:** Often the most cost-effective for heavy-duty applications. Prices can range from \$15 to \$50 per meter depending on thickness and finish .
- **Aluminum cable trays:** Lightweight and corrosion-resistant, typically \$25 to \$70 per meter .
