

Mexican tariff cost for 2-core polarization-guaranteed optical fiber

Article Overview

The import duty for 2-core polarization-guaranteed optical fiber in Mexico depends on its HS code, with rates varying under the General Import Tax (IGI) and potential preferential trade agreements.

Determining the Tariff

- **HS Code Classification** Optical fibers are generally classified under HS Code 8544, which covers “Insulated (including enamelled or anodized) wire, cable, and other insulated electric conductors; optical fiber cables” . The exact subheading for a 2-core polarization-maintaining optical fiber must be confirmed with a licensed customs broker or the Mexican tariff schedule to ensure accurate duty calculation.
- **General Import Tax (IGI)** Mexico applies an ad valorem IGI on the customs value of imported goods. Rates for optical fibers typically range from 0% to 15%, depending on the specific HS subheading and whether the product is considered high-tech or specialized .
- **Preferential Trade Agreements** If the fiber is imported from a USMCA partner (e.g., the United States or Canada), it may qualify for preferential duty rates, potentially reducing the IGI to 0% if all rules of origin and documentation requirements are met . A Certificate of Origin is required to claim this benefit.
- **Additional Taxes and Fees**
- **Value Added Tax (IVA):** Typically 16%, applied on the sum of the customs value plus IGI.
