

New Price Quote for Cable Trays in the Workshop

Article Overview

Cable tray prices in 2026 range from approximately \$2 to \$25 per meter, depending on material, type, size, and installation complexity.

Material and Type Considerations

Cable trays come in various materials, each affecting cost and suitability for workshop environments:

- Pre-Galvanized Steel (PG): Most affordable, suitable for dry indoor areas like workshops, with a thin zinc coating for basic corrosion protection .
- Hot-Dip Galvanized Steel (HDG): More expensive, ideal for areas exposed to moisture or industrial conditions due to thicker corrosion protection .
- Aluminum: Lightweight and rust-resistant, slightly higher cost but easier to install and requires less support .
- Stainless Steel: Highest durability and corrosion resistance, typically used in harsh or specialized environments .
- Wire Mesh/Basket Trays: Cost-effective for light cabling, easy to cut and install, ideal for data or small power cables . Tray types include ladder trays (support heavy cables, more expensive) and solid or perforated trays (protect cables from dust and debris, slightly higher cost than ladder trays for solid bottom designs), .

Installation and Accessories

Installation costs vary based on tray size, complexity, and additional components:
