

PoE boost switch

Overview

A PoE++ switch consolidates everything into a single Ethernet cable. The result?

You can reduce initial installation costs by up to 50% by eliminating countless electrical outlets and dedicated circuits. PoE++ isn't just about. Many PoE and PoE+ devices are designed to operate with 50VDC power input for optimal efficiency, but there are many places, such as vehicles, etc., that have power supplies with source voltages other than 50VDC. What is the unique feature of this Solar POE Switch?

Compared to a regular industrial PoE switch, this solar PoE switch has a built-in DC12V to DC48V voltage booster so it can be powered by any power source between DC12V and DC48V, for example, DC12V from solar power system, DC12V from vehicle. IE3100 PoE integrates a boost power supply that can take 12V or 24V to create 54V for POE applications. Instead, IE3100 PoE passes the 52.5. Following standards: POE technology has standards such as IEEE 802.
