

# Popular FC adapter for Philippine hospitals

## Article Overview

FC fiber optic adapters with zirconia ceramic sleeves, available in single-mode and multimode, are widely used in Philippine hospitals for reliable fiber connections.

### Overview of FC Adapters

FC (Ferrule Connector) adapters are metal-housed coupling devices designed to connect FC fiber optic connectors with high precision. They are commonly used in hospital networks, medical imaging systems, and laboratory data transmission due to their stable, low-loss connections and threaded coupling mechanism that prevents accidental disconnections .

### Key Features

- **Alignment Sleeve:** Zirconia ceramic sleeves ensure precise fiber core alignment, minimizing insertion loss and maintaining signal integrity .
- **Modes:** Available in single-mode (SM) for long-distance, high-bandwidth applications, and multimode (MM) for shorter hospital network links .
- **Configurations:** Simplex (single connection) and duplex (dual connection) types are available, with round or square flange mounts for panel installation .
- **Durability:** Metal housing provides robustness suitable for hospital environments, with operating temperatures typically ranging from -20°C to 70°C .
- **Hybrid Options:** FC adapters can be combined with other connector types (e.g., FC-LC) to integrate different fiber systems in hospital IT infrastructure .
