

Power off switch in distribution box

Overview

Main Switch: This is the “master control” for the entire distribution box, allowing the entire system to be turned off or on. In an emergency, flipping this switch cuts power to all circuits immediately, ensuring that maintenance and troubleshooting can be done. Isolation switches in distribution boxes ensure electrical safety by disconnecting circuits for maintenance, preventing shocks, aiding compliance, and improving system reliability. Today, electrical systems are essential for homes and industries. Conductor connection cross-section, solid, max. : Conductor connection. Incoming Power Supply → Main Switch or Breaker → Busbar → Branch Circuit Breakers → Outgoing Circuits The basic working process is as follows: Power enters the distribution box. The incoming cable carries electrical power from an upstream source, such as a main switchboard, transformer, utility. At the main supply find the main switch that controls the supply to that DB. Place a padlock through the switch where possible, to lock it in the off position.
