

Price list for non-complete electrical distribution boxes

Article Overview

Non-complete electrical distribution boxes, which are empty enclosures without internal components, typically range from \$50 to \$500 depending on size, material, and specifications.

Overview of Non-Complete Distribution Boxes

Non-complete distribution boxes are essentially the shells or enclosures of electrical distribution systems, designed to house circuit breakers, fuses, switches, and other protective devices later. These units are available in plastic, powder-coated steel, or stainless steel, with prices influenced by durability, environmental resistance, and compliance with electrical codes. They are used in residential, commercial, and industrial settings, and can be mounted indoors or outdoors.

Price Ranges

- Small residential plastic enclosures: \$50-\$150. These are lightweight, suitable for single-phase systems, and often used in apartments or small homes.
- Medium-sized steel or ABS boxes: \$150-\$300. These offer better durability, corrosion resistance, and can accommodate multiple circuits.
- Large industrial stainless steel enclosures: \$300-\$500 or more. Designed for heavy-duty applications, outdoor installations, or corrosive environments, these boxes provide long-term reliability and protection. Prices can vary further based on customization options, such as specific mounting configurations, weatherproofing, or integration with building management systems.
