

Roller-type distribution box

Overview

They use a sequence of uniformly spaced cylindrical rollers to efficiently transport boxes, materials, objects, and parts over open spaces or between varying elevations. These roller conveyor frames are crafted at a convenient height, facilitating effortless manual loading and unloading. They are typically used where cartons or crates are being manually or robotically stacked onto. Choose from our selection of box rollers, including roller conveyors, flow rails, and more. The frame profile is GEBHARDT's proprietary aluminium profile. The carrying rollers are made of galvanised steel tubes fitted with low-noise ball bearings. It can consist of roller, belt or toothed belt modules.
