

Router with built-in fiber optic interface

Article Overview

Routers with built-in fiber optic interfaces, like the FRITZ!Box 5590 Fiber or 5690 Pro, connect directly to fiber lines without a separate modem, supporting high-speed Wi-Fi 6/7 and multi-gigabit LAN.

Key Features of Fiber-Ready Routers

Direct Fiber Connection: Unlike traditional DSL or cable routers, routers with integrated fiber optic modems (ONT) can connect directly to GPON, AON, or XGS-PON fiber lines, eliminating the need for a separate optical network terminal . This ensures the full speed of your fiber plan reaches your home network. **High-Speed Wi-Fi Standards:** Modern fiber routers support Wi-Fi 6 or Wi-Fi 7, enabling multiple devices to operate at high speeds simultaneously. For example, the Netgear Nighthawk RS700S offers Wi-Fi 7 with multi-gigabit throughput, ideal for gaming, 4K/8K streaming, and AR/VR applications . **Multi-Gigabit LAN Ports:** Many fiber routers include 10G WAN/LAN ports and multiple 1G LAN ports, allowing wired devices to achieve maximum speeds. Some models support LAN aggregation, combining ports for faster throughput . **Mesh and Coverage Options:** Routers like FRITZ!Box models support mesh networking, allowing you to expand coverage with repeaters or powerline adapters, ensuring stable Wi-Fi throughout large homes or offices . **Security and Management:** Built-in features often include firewall protection, parental controls, Quality of Service (QoS), and app-based management, providing both convenience and network security .

Recommended Models

- FRITZ!Box 5590 Fiber / 5690 Pro: Direct fiber connection, Wi-Fi 6/7, mesh support, integrated telephony, and high-speed LAN ports .
