

Settings for a China Netcom Fiber Optic Router

Article Overview

To configure a China Netcom Fiber Optic Wireless Router, access the router's web interface, enter your ISP credentials, and set up Wi-Fi and security settings.

Initial Setup

- **Physical Connections:** Connect the fiber optic line to the router's WAN or DSL port. Plug in the power adapter and switch on the router. For models like NF8AC, NF10WV, or NF20, ensure any DSL filters are properly installed if required .
- **Access the Web Interface:** Open a web browser and enter the router's default IP address, typically for NF8AC or as indicated on your router label . Use the default username and password printed on the device to log in.

Internet Configuration

- **Enter ISP Credentials:** For PPPoE connections, input the username and password provided by China Netcom. Some VDSL setups may require a VLAN tag (e.g., VLAN 10) depending on your region .
- **WAN Settings:** Ensure the WAN connection type matches your ISP's requirements (PPPoE, DHCP, or static IP). Save the settings and verify the router shows an active internet connection.
