

Several Specifications and Models of Cable Management Frames

Article Overview

Cable management frames come in a variety of models and specifications, including adjustable frames, vertical and horizontal managers, ladder racks, and prefabricated systems, designed to optimize cable organization, accessibility, and space utilization.

Adjustable Cable Management Frames

Adjustable frames are versatile and suitable for both small and large closures, often used in FTTH networks and wall boxes. They typically feature a slim profile to minimize visibility and can rotate on the mounting pole for practical cable winding. These frames include a main part for fastening closures with straps and a pole part for mounting, often made of composite materials. Some models, like the B4 and D5 frames, allow for pole mounting with adequate spacing from the mast for easy access and cable management .

Vertical and Horizontal Cable Managers

Vertical and horizontal cable managers are designed for data centers, telecommunication rooms, and enterprise networks. Vertical cable managers, such as Panduit's PatchRunner 2 Enhanced Vertical Cable Manager, maximize capacity and accessibility for high-density switch and server applications. Horizontal managers provide organized routing for patch cables and can be integrated with vertical systems for seamless cable management. These systems are often modular, allowing customization to fit 2-post or 4-post racks and optimize space utilization .
