

Standard for Transparent Distribution Boxes

Article Overview

Transparent distribution boxes are designed according to IP protection ratings, low-voltage directives, and material standards to ensure safety, durability, and visibility of internal components.

Key Standards and Compliance

1. **IP Protection Ratings:** Transparent distribution boxes are commonly rated IP40 for indoor use and IP65 for outdoor or harsh environments. IP40 provides protection against solid objects larger than 1 mm, while IP65 ensures complete dust-tight protection and resistance to water jets, making it suitable for both indoor and outdoor installations .
2. **Material Standards:** These enclosures are typically made from halogen-free ABS or polycarbonate plastics, which are self-extinguishing, UV-resistant, and durable against impact and environmental wear. ABS is widely used for indoor applications, while polycarbonate is preferred for outdoor use due to superior UV and weather resistance .
3. **Regulatory Compliance:** Transparent distribution boxes comply with low-voltage directives such as 2014/35/EU, ensuring safe operation under low-voltage conditions. They are designed to prevent direct contact with live parts and support proper grounding and neutral connections .
