

The function of drop cable splicing patch cord

Overview

A Fiber Optic Drop Cable patch cord is a short length of fiber optic cable terminated with connectors at both ends, typically used to connect network equipment, such as routers, switches, or servers, to a fiber optic distribution network. Lesson to teach you how to splice patch core with drop cable. Machine:SHINHO S-16 Tools: fiber cleaver, fiber stripper, drop cable stripper, alchohol sprayer, Kevlar, fiber sleeve How to splice patch cord with drop cable□ How to splice patch cord with drop cable□ Lesson to teach you how to splice. How to splice patch cord with drop cable□ - YouTube How to splice patch cord with drop cable□ How to splice patch cord with drop cable□ How to splice patch cord with drop cable□The optical splitter divides one main fiber line into several. This small device "splits" a single optical signal into multiple identical ones, allowing multiple homes or businesses to connect to the same fiber network without losing quality. Splitters make it possible to serve entire neighborhoods. A patch cord has connectors on both ends and a thick protective layer on the outside. It is generally used to connect optical terminals and terminal boxes.
