

The joke about state-owned optical cables

Article Overview

Why did the state-owned optical cable take a year to connect two cities? Because it was waiting for government approval at every junction.

This joke plays on the common stereotype of bureaucratic delays in state-run infrastructure, combining it with the concept of optical cables that are supposed to transmit data at the speed of light. The humor comes from the contrast between the fast potential of fiber optics and the slow pace of government processes. Other variations inspired by cable and optical puns include:

- “The state-owned fiber optic network is so slow, even photons have to fill out forms before passing through.” This exaggerates the slowness humorously while referencing the physics of light.
- “Why don't state-owned optical cables ever get lost? Because they're always stuck in red tape.” This uses a pun on bureaucratic “red tape” and the literal cable.
- “The government launched a new optical cable project. It's so efficient, it delivers emails before you even send them... eventually, after a decade of planning.” This highlights the irony of slow implementation despite advanced technology. These jokes follow the style of fiber-optic and cable humor found in sources like JokeJokes and Punsify, which often combine technical terms with everyday frustrations for comedic effect. They are suitable for tech enthusiasts, engineers, or anyone familiar with the quirks of state-run projects.
