

What is a cable tray shielding cover

Overview

Tray cable shields protect against EMI. If you're installing a cable tray system, you want to know whether it blocks interference or not. What Is Cable Tray Shielding Capability?

Shielding capability refers to how well a cable. Cable tray covers are protective enclosures that shield cables from environmental hazards while ensuring compliance with safety standards like NEC 392. 10 (B) corrosion resistance. Tray cable is comprised of two or more insulated conductors, a ground conductor, and a protective jacket. Its purpose is to collect and drain off electromagnetic interference (EMI) and radio frequency interference (RFI). If you've specified or installed tray cable, you've likely seen the thin layer of foil or braided metal surrounding the wire pairs or all the conductors.
