

What is a type of wall-mounted network cabinet called

Article Overview

Wall-mounted network cabinets are also called in-wall cabinets, recessed cabinets, or wall-mount racks.

Wall-mounted network cabinets are compact enclosures designed to hold networking equipment such as routers, switches, patch panels, and other IT devices directly on or inside a wall, saving floor space and improving organization . They are commonly used in small offices, clinics, retail stores, and edge computing environments where space is limited .

Common Names and Types

- In-wall cabinets / Recessed cabinets: Installed flush with the wall, similar to a medicine cabinet, providing a neat, low-profile appearance .
- Wall-mount racks: Open-frame or mini-shelf designs attached to the wall, ideal for small spaces and easy access .
- Enclosed cabinets: Fully enclosed with hinged or removable doors, often made of steel or aluminum, protecting equipment from dust and unauthorized access .
- Locking cabinets: Enclosed cabinets with lockable doors for added security against theft or tampering .
- Swing-out cabinets: Feature a mechanism that allows the entire cabinet to swing out from the wall for easier maintenance and access .
