

What size router should I use with two gigabit fiber optic cables

Overview

For 2+ Gbps fiber plans, a router with a 10 GbE RJ45 or SFP+ combo port is necessary to avoid leaving bandwidth on the table. Wi-Fi 6 routers with 160 MHz channels can theoretically hit 1.2 Gbps on the 5 GHz band, which works for 1 Gbps fiber but leaves no headroom. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. The wrong router can leave you paying for 2 Gbps of fiber while struggling with buffering, lag spikes, and dead zones on a 200 Mbps feed. The right pick depends on your ONT, speed tier, home wiring, and how much control you want. Fiber changes the router conversation because upload speed can be just as important. Upgrading to a router built for fiber optic means matching multi-gig WAN ports with a backplane that can actually forward packets at wire speed, not the sub-1 Gbps ceiling older hardware imposes.
