

Which type of fiberglass cable tray is better in India

Article Overview

Ladder-type FRP cable trays are generally preferred for power and heavy-duty applications, while trough or solid-bottom trays are better for sensitive control and communication cables in India.

Overview of FRP Cable Trays in India

Fiberglass (FRP) cable trays are increasingly favored in India due to their corrosion resistance, lightweight construction, electrical insulation, and fire-retardant properties. They perform exceptionally well in harsh environments such as coastal areas, chemical plants, water treatment facilities, and power generation units, where traditional steel or aluminum trays may corrode or degrade quickly. FRP trays also reduce installation time and labor costs due to their lighter weight and modular design.

Common Types and Applications

- Ladder-Type FRP Cable Trays
- Features open rungs for maximum ventilation and heat dissipation.
- Ideal for power distribution, substations, and industrial plants.
- Supports large-diameter power and control cables and allows easy modification when adding or removing cables.
- Trough or Channel-Type FRP Cable Trays
- Provides partial or full enclosure for better protection against dust, moisture, and mechanical damage.
